

Amendments to the Claims

Please cancel claim 34 without prejudice or disclaimer.

Please amend the claims as follows:

1. (Currently Amended) A front filter of a plasma display panel, the front filter comprising:
a frame adhesive located between an antireflection layer and an electromagnetic shielding layer of the front filter, the frame adhesive having a transparent adhesive formed at an active display area of the plasma display panel and a black adhesive formed at a nonactive display area surrounding the active display area,~~wherein the black adhesive adheres to a plurality of structures and the transparent adhesive adheres to at least two of the plurality of structures.~~
2. (Cancelled)
3. (Previously Presented) The front filter of the plasma display panel of claim 1, wherein the black adhesive is formed by mixing the transparent adhesive with a black material.
4. (Previously Presented) The front filter of the plasma display panel of claim 3, wherein the black adhesive is 0.05~50% black material.

5. (Currently Amended) A front filter, attached to an upper glass substrate of a plasma display panel, having a near infrared shielding layer, an electromagnetic shielding layer, and an antireflection layer, comprising:

a plurality of adhesives formed ~~on the upper glass substrate or~~ between the near infrared shielding layer, the electromagnetic shielding layer and the antireflection layer, wherein one of the plurality of adhesives is a frame adhesive having a black adhesive for defining an active display area of the plasma display panel and a transparent adhesive formed at an active display area of the plasma display panel, wherein the frame adhesive is located between the antireflection layer and the electromagnetic shielding layer. ~~black adhesive adheres to a plurality of structures and the transparent adhesive adheres to at least two of the plurality of structures.~~

6. (Previously Presented) The front filter of claim 5, wherein the black adhesive is formed at a nonactive display area surrounding the active display area.

7. (Cancelled)

8. (Currently Amended) A fabrication method of a front filter of a plasma display panel, the fabrication method comprising:

preparing a base film;

forming a black adhesive at a nonactive display area of the plasma display panel, wherein the nonactive display area is positioned on the base film; and

forming a transparent adhesive at an active display area of the plasma display panel, wherein the active display area is positioned on the base film, and wherein the black adhesive and the transparent adhesive are located between an antireflection layer and an electromagnetic shielding layer of the front filter. ~~adheres to a plurality of structures and the transparent adhesive adheres to at least two of the plurality of structures.~~

9-15. (Cancelled)

16. (Previously Presented) The front filter of claim 5, wherein the frame adhesive is formed on the electromagnetic shielding layer.

17. (Previously Presented) The front filter of claim 5, wherein a transparent adhesive is formed at an area that is overlapped with the active display area.

18. (Previously Presented) The front filter of claim 5, wherein the black adhesive is formed by mixing a transparent adhesive with a black material.

19. (Previously Presented) The front filter of claim 18, wherein the black adhesive is 0.05~50% black material.

20. (Previously Presented) The front filter of claim 5, further comprising: a base film.

21. (Previously Presented) The method of claim 8, wherein the nonactive display area is positioned on an outer area of the active display area.

22. (Previously Presented) The method of claim 8, wherein the black adhesive is formed by one of a printing method, a laminating method and a pressing method.

23. (Previously Presented) The method of claim 8, wherein the transparent adhesive is formed by one of a printing method, a laminating method and a pressing method.

24. (Currently Amended) A fabrication method of a front filter of a plasma display panel, the method comprising:

preparing a base film;

forming a transparent adhesive at an active display area of the plasma display panel, wherein the active display area is positioned on the base film; and

forming a black adhesive at a nonactive display area of the plasma display panel after forming the transparent adhesive, wherein the nonactive display area is positioned on the base film, and wherein the black adhesive and the transparent adhesive are located between an antireflection layer and an electromagnetic shielding layer of the front filter. ~~adheres to a plurality of structures and the transparent adhesive adheres to at least two of the plurality of structures.~~

25. (Previously Presented) The method of claim 24, wherein the transparent adhesive is formed by a first screen mask having a hole corresponding to the active display area.

26. (Previously Presented) The method of claim 25, wherein the black adhesive is formed by a second screen mask that shields the active display area.

27. (Previously Presented) The method of claim 24, wherein the nonactive display area is positioned on an outer area of the active display area.

28. (Previously Presented) The method of claim 24, wherein the black adhesive is formed by one of a printing method, a laminating method and a pressing method.

29. (Previously Presented) The method of claim 24, wherein the transparent adhesive is formed by one of a printing method, a laminating method and a pressing method.

30. (Currently Amended) A fabrication method of a front filter of a plasma display panel, the method comprising:

preparing a base film;

forming a transparent adhesive on a whole screen area of the plasma display panel; and

forming a black adhesive on a nonactive display area of the plasma display panel,

wherein the black adhesive is positioned on the transparent adhesive, and wherein the black adhesive and the transparent adhesive are located between an antireflection layer and an electromagnetic shielding layer of the front filter. ~~adheres to a plurality of structures and the transparent adhesive adheres to at least two of the plurality of structures.~~

31. (Previously Presented) The method of claim 30, wherein the nonactive display area is positioned on an outer area of the active display area.

32. (Previously Presented) The method of claim 30, wherein the black adhesive is formed by one of a printing method, a laminating method and a pressing method.

33. (Previously Presented) The method of claim 30, wherein the transparent adhesive is formed by one of a printing method, a laminating method and a pressing method.

34. (Cancelled)
